## Iman Baghai

*

Who am I?

I'm trying to make an **impact** in the world by deciphering and **enabling people** with the **insights and possibilities** found at the **intersection of people, information, and technology.**

What I'm looking to do:

I'm looking to take bring together **my passions & interests** and work with a team willing **to break-free of antiquated systems** and **drive positive outcomes for people.**
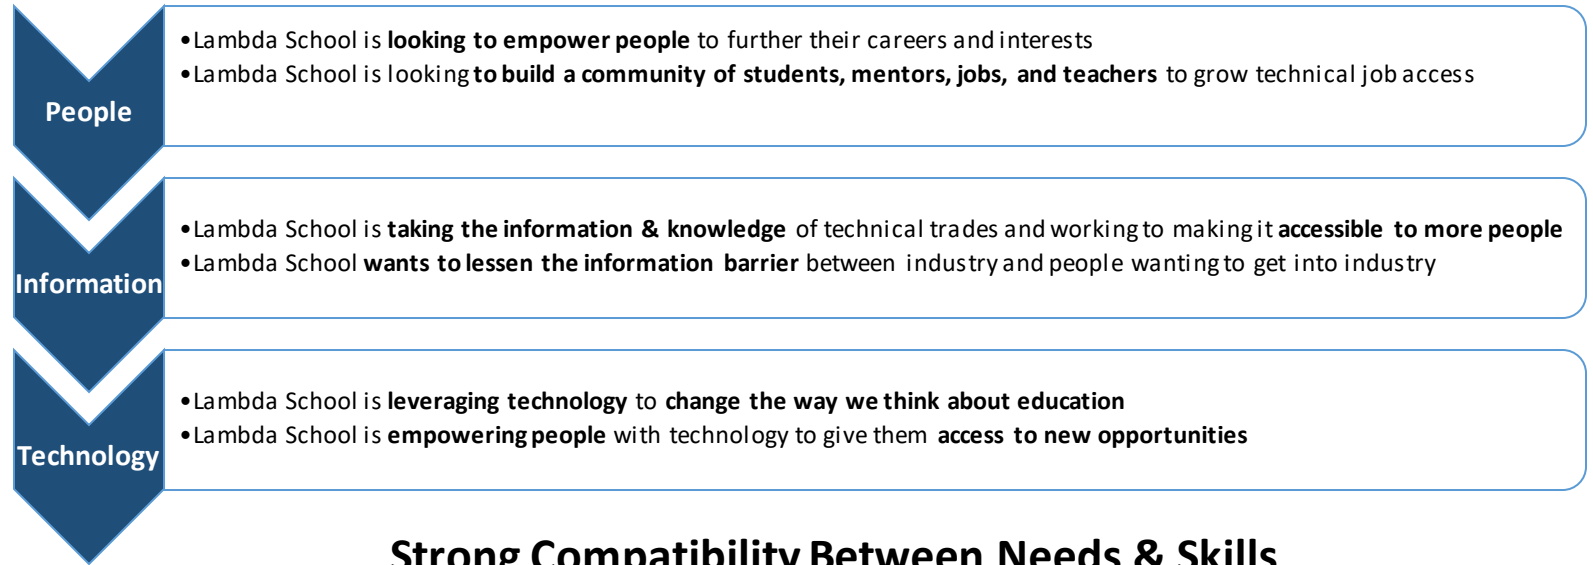

What I have been doing:

I've been working as a **strategy & analytics consultant** for Google via Accenture for the past two years Google via Accenture for the past two years helping building go-to-market & commercialization strategy for a beta product. Before that at university I worked as a TA to build an intro to R course and SQL courses.
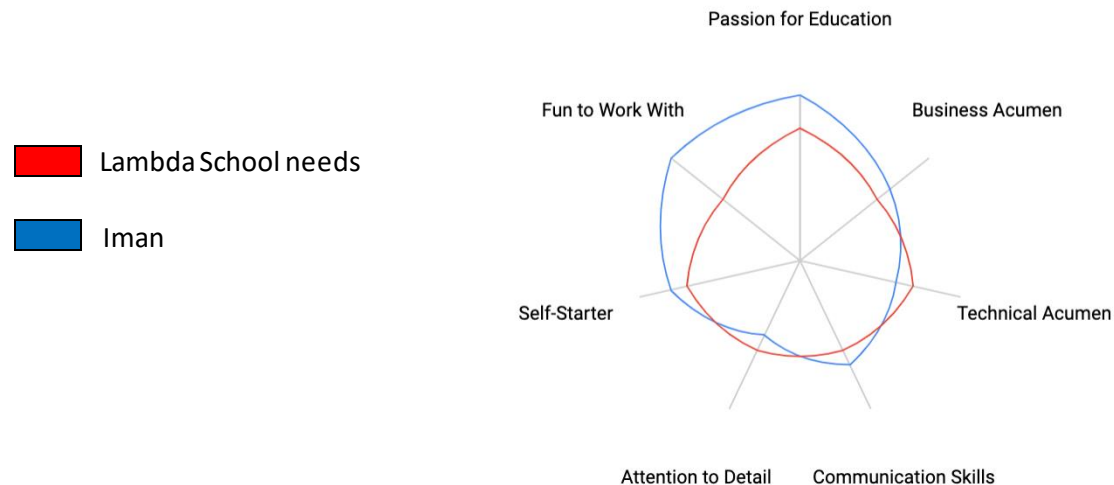

What did I study

I got a double degree from the **University of Washington** in Political Science (B.A.) and Informatics with a focus in data science (B.S.). Political Science taught me how to **understand organizations, people, and institutions.**

Informatics and data science taught me how to better understand **how technology and data can affect people and institutions.**

∗ Shamelessly still using high school senior photo

Why are Iman and Lambda School a Good Fit?

People
- Lambda School is **looking to empower people** to further their careers and interests
- Lambda School is looking **to build a community of students, mentors, jobs, and teachers** to grow technical job access

Information
- Lambda School is **taking the information & knowledge** of technical trades and working to making it **accessible to more people**
- Lambda School **wants to lessen the information barrier** between industry and people wanting to get into industry

Technology
- Lambda School is **leveraging technology** to **change the way we think about education**
- Lambda School is **empowering people** with technology to give them **access to new opportunities**

Strong Compatibility Between Needs & Skills

🟥 Lambda School needs
